

DeactiTrack

Capture Every Deactivation with Context

What is DeactiTrack?

DeactiTrack helps organizations maintain data integrity and audit trails by capturing the who, what, when, and why behind every record deactivation in Microsoft Dataverse. It works quietly in the background, providing visibility into deactivated records and the reasons behind them—so nothing gets lost or forgotten.

Key Benefits

Automatic Tracking: Logs every record deactivation with timestamps and user details.

Reason Capture: Prompts users to provide a reason before completing a deactivation.

Field Snapshots: Optionally captures all field values at the moment of deactivation for complete visibility.

Configurable Setup: Choose which tables to track and which forms to use for each scenario.

Admin Insights: Centralized Model-Drive App to view, filter, and export deactivation logs.

Secure & Compliant: Keeps your audit trails intact without manual intervention.

How it Works

- User deactivates a record → a DeactiTrack pop-up appears prompting for details
- User submits reason → DeactiTrack logs the event and (optionally) snapshots the record
- Admins review logs in the DeactiTrack Admin app to analyze trends or restore context

Why Customers Love It

- Eliminates mystery “missing” records
- Supports compliance and audit readiness
- Helps identify workflow and data quality issues
- Simple to deploy, no code required

Availability

- **Platform:** Microsoft Dataverse/D365
- **Install From:** Microsoft AppSource
- **Trial:** 14-Day Free Trial Included
- **Support:** support@bizappsunlocked.com
